Career Objective

B.Tech Computer Science Engineering student with hands-on experience in Python and web technologies (HTML, CSS, Django). Completed internships in Python development and Data Science/Machine Learning, building project-based solutions using agile practices. Applied programming and analytical skills to real-world projects involving data processing, model development, and system design. Seeking a Web Development Internship to build functional, user-friendly web applications.

Technical Skills

Programming Languages: Python, C (Basics), Java (Basics)

Web Technologies: HTML, CSS

Frameworks: Django

Databases: SQL, MySQL

Tools & Version Control: Git, GitHub

Core Concepts: Object-Oriented Programming (OOPs), Data Management

Internship Experience

Python Programming Intern Syntax Cohort

- Developed and optimized Python-based solutions while following agile software development practices.
- Gained hands-on experience in code optimization, debugging, and project-based software development.
- Collaborated on project deliverables and explored production-oriented system architecture and development workflows.

Data Science & Machine Learning Intern Upskill Campus

- Completed a hands-on internship in Data Science and Machine Learning, gaining practical experience through industry-oriented projects.
- Applied data analysis and machine learning concepts to develop solutions for real-world project requirements.
- Built practical experience in ML workflows, problem-solving, model development, and project implementation.

Projects

AI Resume Screening and Shortlisting System Python, NLP, Scikit-learn

- Developed an AI-powered resume screening system to analyze resumes and match candidates against job requirements.
- Implemented resume parsing, text preprocessing, and skill extraction using Python and NLP techniques.
- Built a candidate ranking and shortlisting mechanism using machine learning (Scikit-learn) based on skill and job-description relevance.

Agriculture Crop Production Prediction Python, Pandas, NumPy, Scikit-learn

- Developed a machine learning model to predict crop production using agricultural and environmental data.
- Performed data preprocessing, feature analysis, and exploratory data analysis using Python, Pandas, and NumPy.
- Trained and evaluated machine learning models using Scikit-learn to generate predictions supporting data-driven agricultural decisions.

Education

B.Tech in Computer Science Engineering **CGPA: 8.3**
Kodada Institute of Technology and Science for Women | 2023 – 2027

Intermediate (MPC) **CGPA: 9.5**
TSRJC, Rammanapet | 2021 – 2023

SSC **CGPA: 9.7**
Priya Educational Academy, Ramapuram | 2021

Certifications

- Python Essentials 1 – Cisco Networking Academy (via TASK): foundational Python programming, including data types, loops, functions, and basic OOP concepts.
- RBI 90 Quiz on Financial Literacy – Reserve Bank of India: Certificate of Participation, national-level financial awareness quiz.

Achievements & Activities

- Actively developing skills in Python, AI/ML, and Data Science through academic projects and structured learning programs.
- Participated in internships, skill-development programs, and technical quizzes to strengthen practical knowledge.
- Built and worked on multiple Python-based projects, gaining hands-on programming and problem-solving experience.
